

## ***Bunkerstamp*** Imprinting Tips

Keep your Bunkerstamp dry. You'll find that wet sand likes to cling to some wet stamps. Although they will imprint when they are damp, the sand may stick to the mould in a mixture of wet and dry sand or very wet sand. Be sure to wipe the stamp clean after every use. We recommend using a nylon bristle brush for quick cleaning.

Bunkerstamping smoothed sand leaves the best imprint. Simply rake the area where you plan to place the stamp or turn the stamp upside down and drag it across an area at an angle until you smooth out the area where you plan to imprint.

Bunkerstamp will work on all bunkers. Some bunkers contain fine sand while others are coarser. Bunkerstamp works well with either. You should take some water with you (we recommend a garden sprayer or a garden watering can) to create the ideal sand moisture consistency in the area where you are imprinting (step 1). The sand – moisture balance will become evident as you learn to create sharp, crisp looking imprints.

Step 1

Step 2

Step 3

Step 4

Bunkerstamping is easy but it might take a little practice to get the perfect imprint. Be sure to lower the stamp straight down on the sand slowly to avoid marring the spot you want to imprint (step 2). Press the stamp into the sand by stepping on the Bunkerstamp and using your body weight walk around on the complete stamp (step 3). Distribute your weight evenly over the complete area forcing the face of the Bunkerstamp into the sand. Then simply grasp the handles and lift straight up very slowly (step 4). Rake your footprints out of the area where you have been working and you are done. It's that simple.

Bunkerstamps often stand out best when they are placed on the slope of a bunker that faces the golfers as they approach or depart a green. Using the same instructions as above are appropriate but you will need to insure that the stamp does not slide downward as you shuffle on it. Using one foot with an upward stepping motion may be more appropriate or having a second person available to prevent the stamp from drifting may be an alternative.

After a couple of imprints you will learn that imprinting is quick and easy.
